

FDC EnVision V1.0 installation notes

When installing FDC EnVision as upgrade to version V1.0, please backup your current configuration following the below steps. Failure to do so will require re-entering configuration data after the upgrade. Data files, notes, profiles and other stored data will not be affected by the upgrade.

1. From the "File" menu select "Save Project". Type a backup name in the "file name" field and press the "Save" button. The project will be backed up.
2. Install FDC EnVision V1.0 from the installer program.
3. After installation, start FDC EnVision and select the "File/Load Project" menu.
4. Navigate to the project saved in step 1 and restore the user configuration.
5. Upgrade is completed.
