

Installation of Windows “OS” components before running MCT-Connect installer

Important Note: Before installing MCT-Connect, make sure the Windows10 machine being used has the most recent Windows 10 system updates applied.

MCT-Connect uses .NET and Windows 10 “IIS” services that must be installed first and are covered in the first section of the MCT-Connect manual. It’s important that these “OS” components are installed before the MCT-Connect installer is run. Failure to do so will cause system operation and connections to fail.

The document “Tech Note. De-Install MCT-Connect_V1.0” covers the de-installation of MCT-Connect if required.
